Dear Landscaper:

Is your business drowning in a sea of paperwork? Are you struggling to control your receivables and improve cash flow? Is your staff consumed with chemical record keeping, proposals and routing instructions? In short, are you dissatisfied with the efficiency and productivity of your business systems?

If the answer is YES to any of these questions, then you owe it to yourself to experience first hand the power of the computer-based system designed expressly for the landscaping industry-
LANDSCAPE BUSINESS MANAGEMENT SYSTEM.

In addition to its billing and accounts receivables function, the system offers a broad range of capabilities, including proposals, spray and chemical scheduling/routing, chemical records and sales analysis. The system runs on Windows and delivers savings and efficiencies over manual methods or computerized off the-shelf software. That's because the Landscape Business Management System is a completely integrated system that provides a smooth flow of data between applications.

Best yet, it is flexible enough to be adjusted with periodic updates and customized with enhancements tailored to user requirements. And our team of software system specialists is available with the necessary support to ensure that the system grows with your business.

The system is only \$495.00. This includes 1 hour of free telephone support and a 30-day money back guarantee.

Sincerely,

Robert W. Rapp
President
